

FOR IMMEDIATE RELEASE: March 26, 2019

**Voss Industries, LLC plans to relocate to 1000 West Bagley Road, Berea, Ohio.**

Voss is announcing plans to relocate to an upgraded and modern facility located just 15 minutes from the current facility in Ohio City. The move is expected to begin in the 3<sup>rd</sup> quarter of 2019 and be finalized in 2020. The company manufactures highly engineered products for the aerospace, defense, and industrial end markets. Voss products have been used in the Space Shuttle program as well as all major commercial and military platforms.

Voss has continued to invest in the local community and required a facility that was more suitable for long term exponential growth. “We appreciate the support of JobsOhio and the local communities to make it possible for us to stay in Northeast Ohio and to retain and grow our talented workforce. We had hoped to stay in the city of Cleveland, however there was a lack of vacant, modern manufacturing facilities to meet our needs. The city of Berea welcomed us and provided assistance to help make the project work for both our company and the local community” said executives at Voss.

Voss Industries was approved for a JobsOhio Revitalization Grant and a JobsOhio Economic Development Grant. The company estimates it will generate several million in additional annual payroll, meeting the needs of a growing customer list. Voss is expanding its global business and expects to add additional positions over the next several years. This plan has been formally approved by JobsOhio, the city of Berea, and the company.

“Voss Industries has a longstanding heritage of manufacturing precision aerospace products in Northeast Ohio, and we and our partners at Team NEO are excited they chose to expand here,” said Glenn Richardson, JobsOhio managing director for aerospace and aviation. “The refurbished, expansive facility in Berea will allow Voss to retain their existing skilled workforce and add nearly 60 new jobs to support their ongoing innovation for their customers worldwide.”

Voss is actively recruiting to supplement their highly trained workforce. The company has open positions in the areas of design engineering, manufacturing engineering, continuous improvement, as well as skilled positions in welding, CNC machining, and maintenance. Individuals interested in joining the Voss Aerospace team should contact the company at [www.vossind.com](http://www.vossind.com).
